

Ryan Eromosele Osagiede

LLM Application Developer | AI Application Engineer

Nairobi, Kenya · +254 758 840 248 · ryanosagiede4@gmail.com · GitHub: github.com/ryanreo

SUMMARY

Software Development student at KCA University building LLM-powered applications that solve real business problems. Hands-on with DeepSeek, GLM-5.2 and OpenAI-compatible APIs — prompt engineering, structured output parsing, intent classification, tool calling, and RAG over business documents. Built and published a working LLM-powered WhatsApp customer-support agent — live demo (github.com/ryanreo/ecom-support) and freelances building websites. Designs applications that turn unstructured business input into reliable, structured, automated outcomes.

SKILLS

AI & Automation: LLM integration (DeepSeek, GLM-5.2, OpenAI-compatible) · Prompt engineering & system prompt design · Structured output parsing & JSON schema · Intent classification & routing · Retrieval-Augmented Generation (RAG) · Embeddings & vector search (Supabase) · Tool calling & agent orchestration

Software Development: JavaScript / TypeScript · Python · Node.js · HTML / CSS · REST APIs & API integration · Database design (relational + Supabase)

Tools & Platforms: n8n · OpenClaw · DeepSeek · GLM-5.2 · Supabase · MySQL · PostgreSQL · WhatsApp Business API · Twilio · Africa’s Talking · M-Pesa Daraja API · Gmail API · Google Sheets · Google Drive · Telegram API · Slack

SELECTED PROJECTS

Social Commerce Order Support & Returns Agent **BUILT · LIVE DEMO** github.com/ryanreo/ecom-support

n8n · DeepSeek · OpenClaw · WhatsApp · JSON store (Supabase-ready)

Built a WhatsApp-first AI support agent that classifies customer intent with DeepSeek and answers order-status, product, and return questions automatically from the shop’s own data.

Agentic Workflow Lab — Self-Verifying AI Agents **BUILT · PUBLISHED** github.com/ryanreo/agentic-workflow-lab

Python (zero dependencies) · DeepSeek · eval harness · interactive traces

Built an agent engine from scratch that plans, calls tools, observes results, and self-verifies in a loop — refusing to finish until its own verifier confirms the work is done.

Jua Kali Supplier Intelligence & Trust Agent *n8n · GLM-5.2 · DeepSeek · Supabase · OpenClaw*

Designed an agent that collects supplier listings from classifieds and WhatsApp, uses GLM-5.2 to flag scams and extract product/spec details, and builds a searchable supplier trust database in Supabase.

Custom Gifting & Magazine Concierge Agent *n8n · GLM-5.2 · Supabase · WhatsApp · M-Pesa Daraja API*

Designed a WhatsApp concierge that captures client gift requests, generates design briefs with GLM-5.2’s long-context memory, and tracks the order from inquiry to design, payment, and delivery.

Rent Collection & Maintenance Request Agent *n8n · DeepSeek · Supabase · Africa’s Talking · M-Pesa Daraja API*

Designed an SMS/USSD-first system that sends rent reminders, matches M-Pesa payments, and uses DeepSeek to categorize tenant maintenance requests into ticketed records.

Freelancer Invoice & Payment Tracker Agent *n8n · GLM-5.2 · DeepSeek · Gmail API · Supabase*

Designed an invoice assistant that detects invoices in Gmail, uses GLM-5.2 to extract amount, due date, and client details, and sends automated payment reminders.

AUTOMATION WORKFLOWS

WhatsApp lead intake & AI-qualified follow-up workflow · SME social media content generation & approval workflow · Customer support knowledge-base workflow (RAG over business documents) · Meeting notes & action-item summarizer workflow · Expense & M-Pesa transaction categorization workflow

EXPERIENCE & EDUCATION

Freelance Web Developer — built client websites end to end.

BSc Software Development — KCA University (2023 – Present, expected 2026)

St. John’s Cadet Leader (2021) · School Prefect (2020)

LANGUAGES & LEARNING

English (Professional) · Swahili (Native / Professional)

Current focus: LLM application development, AI agent orchestration, workflow automation, RAG systems, API integration, and AI-powered business process design.
