

Ryan Eromosele Osagiede

LLM Application Developer | AI Application Engineer

Nairobi, Kenya · +254 758 840 248 · ryanosagiede4@gmail.com · GitHub: github.com/ryanreo

PROFESSIONAL SUMMARY

Software Development student at KCA University building LLM-powered applications that solve real business problems. Hands-on with DeepSeek, GLM-5.2 and OpenAI-compatible APIs — prompt engineering, structured output parsing, intent classification, tool calling, and RAG over business documents. Built and published a working LLM-powered WhatsApp customer-support agent — live demo (github.com/ryanreo/ecom-support) and freelances building websites. Designs applications that turn unstructured business input into reliable, structured, automated outcomes.

PROOF OF WORK

5 AI agent prototypes focused on Kenyan business problems · 5 practical automation workflows for SMEs and freelancers · 2 published projects with live demos, GitHub repos, architecture docs, and eval results · demo walkthroughs in progress.

CORE SKILLS

AI & Automation

- LLM integration (DeepSeek, GLM-5.2, OpenAI-compatible)
- Prompt engineering & system prompt design
- Structured output parsing & JSON schema
- Intent classification & routing
- Retrieval-Augmented Generation (RAG)
- Embeddings & vector search (Supabase)
- Tool calling & agent orchestration

Software Development

- JavaScript / TypeScript
- Python
- Node.js
- HTML / CSS
- REST APIs & API integration
- Database design (relational + Supabase)

Tools & Platforms

- n8n · OpenClaw · DeepSeek · GLM-5.2 · Supabase · MySQL · PostgreSQL
- WhatsApp Business API · Twilio · Africa's Talking · M-Pesa Daraja API
- Gmail API · Google Sheets · Google Drive · Telegram API · Slack

Business & Product

- Business process mapping
- SME workflow analysis
- Customer journey design

LLM APPLICATION PROJECTS

Social Commerce Order Support & Returns Agent BUILT · LIVE DEMO github.com/ryanreo/ecom-support

n8n · DeepSeek · OpenClaw · WhatsApp · JSON store (Supabase-ready)

- Built a WhatsApp-first AI support agent that classifies customer intent with DeepSeek and answers order-status, product, and return questions automatically from the shop's own data.
- Implemented a production n8n workflow (webhook → normalization → intent classification → per-intent reply branches) with full conversation logging, RMA tracking for returns, and human-escalation flags.
- Wired an OpenClaw skill so the WhatsApp-connected agent relays customer messages to n8n and sends the reply back in seconds.
- Published with architecture docs, n8n workflow export, data schema, and impact analysis — designed to cut vendor response time from hours to seconds.

Agentic Workflow Lab — Self-Verifying AI Agents BUILT · PUBLISHED github.com/ryanreo/agentic-workflow-lab

Python (zero dependencies) · DeepSeek · eval harness · interactive traces

- Built an agent engine from scratch that plans, calls tools, observes results, and self-verifies in a loop — refusing to finish until its own verifier confirms the work is done.
- Shipped four working agents (pipeline doctor, document extractor, deep researcher, QA agent) with a reproducible eval harness: 4/4 tasks passing on DeepSeek, measured across runs.
- Published interactive step-through traces so every thought, tool call, and self-check is inspectable — the observability production agent teams rely on.

Jua Kali Supplier Intelligence & Trust Agent

- Designed an agent that collects supplier listings from classifieds and WhatsApp, uses GLM-5.2 to flag scams and extract product/spec details, and builds a searchable supplier trust database in Supabase.

Custom Gifting & Magazine Concierge Agent

n8n · GLM-5.2 · Supabase · WhatsApp · M-Pesa Daraja API

- Designed a WhatsApp concierge that captures client gift requests, generates design briefs with GLM-5.2’s long-context memory, and tracks the order from inquiry to design, payment, and delivery.

Rent Collection & Maintenance Request Agent

n8n · DeepSeek · Supabase · Africa’s Talking · M-Pesa Daraja API

- Designed an SMS/USSD-first system that sends rent reminders, matches M-Pesa payments, and uses DeepSeek to categorize tenant maintenance requests into ticketed records.

Freelancer Invoice & Payment Tracker Agent

n8n · GLM-5.2 · DeepSeek · Gmail API · Supabase

- Designed an invoice assistant that detects invoices in Gmail, uses GLM-5.2 to extract amount, due date, and client details, and sends automated payment reminders.

EVERYDAY AUTOMATION WORKFLOWS

- WhatsApp lead intake & AI-qualified follow-up workflow
- SME social media content generation & approval workflow
- Customer support knowledge-base workflow (RAG over business documents)
- Meeting notes & action-item summarizer workflow
- Expense & M-Pesa transaction categorization workflow

SOFTWARE DEVELOPMENT BACKGROUND

- Freelance web developer — built websites for clients end to end (design, development, deployment).
- Built and published a production n8n + DeepSeek application (github.com/ryanreo/ecom-support) covering webhook handling, AI integration, data persistence, and documentation.
- Built web-based applications using software development principles, relational database design, REST APIs, version control, and technical documentation (JavaScript/TypeScript, Python, Node.js).

LEADERSHIP

St. John’s Cadet Leader (2021) · School Prefect (2020)

EDUCATION

BSc Software Development — KCA University (2023 – Present, expected 2026)

TECHNICAL TOOLSTACK

Automation Stack

- n8n
- OpenClaw
- GLM-5.2
- DeepSeek
- Supabase
- MySQL
- PostgreSQL
- REST APIs
- Webhooks

Integrations

- WhatsApp Business API
- Twilio
- Africa’s Talking
- M-Pesa Daraja API
- Gmail API
- Google Sheets
- Telegram API
- Slack

Development

- Git & GitHub
- VS Code
- Postman
- Node.js
- Python
- JavaScript / TypeScript

LANGUAGES

English (Professional) · Swahili (Native / Professional)

CURRENT LEARNING FOCUS

LLM application development, AI agent orchestration, workflow automation, RAG systems, API integration, and AI-powered business process design.
