Ryan Eromosele Osagiede

AI Data Annotator | AI Evaluator | AI Data Trainer

Nairobi, Kenya · +254 758 840 248 · ryanosagiede4@gmail.com · GitHub: github.com/ryanreo

PROFESSIONAL SUMMARY

Detail-oriented Software Development student at KCA University with hands-on experience working with large language models: writing and refining prompts, judging whether AI output is correct, and building checks that catch factual, arithmetic and formatting errors. Native Swahili and professional English speaker, comfortable with Kenyan English, Swahili and Sheng code-switching. Used to following detailed written rules precisely, documenting edge cases clearly, and keeping quality consistent over repetitive, high-volume work.

RELEVANT SKILLS

AI Evaluation & Data Quality

- Judging AI responses for accuracy, relevance and instruction-following
- Fact-checking claims against source material
- Spotting hallucinations and unsupported statements
- Writing clear, structured feedback and reproduction steps
- Prompt writing & prompt refinement

Labelling & Data Handling

- Text classification / intent labelling
- Extracting structured fields from documents
- Validating data against rules and schemas (JSON)
- Spreadsheets: Google Sheets, data cleaning & tracking
- Fast, accurate typing; strong computer literacy

Work Habits

- Follows long, detailed guidelines exactly · flags ambiguous cases instead of guessing · self-reviews work before submitting · reliable with deadlines and weekly volume targets

RELEVANT EXPERIENCE & PROJECTS

Self-Verifying AI Agents & Evaluation Harness github.com/ryanreo/agentic-workflow-lab

- Built a test (evaluation) harness that scores AI output against defined pass/fail criteria and measures results across repeated runs: 4/4 tasks passing on DeepSeek.
- Designed a research agent that checks every claim in its report against sources and rejects anything unsupported — the same judgement used in AI response rating and fact-checking tasks.
- Built a document extractor that pulls invoice fields and re-checks its own arithmetic until every value validates.
- Built a QA agent that tests live apps and files bug reports with clear reproduction steps.

AI Customer-Support Agent (Intent Classification) github.com/ryanreo/ecom-support

- Defined intent categories for customer WhatsApp messages (order status, product questions, returns) and had an LLM classify each message into the right category.
- Logged every conversation and flagged cases needing human review — a human-in-the-loop quality process.

Freelance Web Developer

- Built client websites end to end, working from client briefs and revising to meet their requirements.

LANGUAGES

Swahili — Native / Professional · **English** — Professional

EDUCATION

BSc Software Development — KCA University (2023 – Present, expected 2026)

LEADERSHIP

St. John's Cadet Leader (2021) · School Prefect (2020)
