

Ryan Eromosele Osagiede

AI Agent Developer | LLM Application Developer

Nairobi, Kenya · +254 758 840 248 · ryanosagiede4@gmail.com · GitHub: github.com/ryanreo

PROFESSIONAL SUMMARY

Software Development student at KCA University who designs AI agents that do real work for Kenyan businesses — answering customers, vetting suppliers, chasing invoices, managing rentals. Strong on agent architecture, intent classification, LLM orchestration (DeepSeek, GLM-5.2), RAG, and human-in-the-loop guardrails, deployed through n8n and OpenClaw. Built and published a live WhatsApp support agent (github.com/ryanreo/ecom-support) and freelances building websites.

PROOF OF WORK

5 AI agent prototypes focused on Kenyan business problems · 5 practical automation workflows for SMEs and freelancers · 1 live published project with GitHub repo, architecture diagram, n8n workflow export, and documentation · demo walkthroughs in progress.

CORE SKILLS

AI & Automation

- AI agent design & orchestration
- LLM integration & model routing
- Intent classification & conversation flows
- Retrieval-Augmented Generation (RAG)
- Memory & context management
- Tool calling & structured outputs
- Human-in-the-loop approval & escalation

Software Development

- JavaScript / TypeScript
- Python
- Node.js
- HTML / CSS
- REST APIs & API integration

Tools & Platforms

- n8n · OpenClaw · DeepSeek · GLM-5.2 · Supabase · MySQL · PostgreSQL
- WhatsApp Business API · Twilio · Africa’s Talking · M-Pesa Daraja API
- Gmail API · Google Sheets · Google Drive · Telegram API · Slack

Business & Product

- Business process mapping
- SME workflow analysis
- Customer journey design
- Operational cost reduction

AI AGENT PROJECTS

Social Commerce Order Support & Returns Agent BUILT · PUBLISHED github.com/ryanreo/ecom-support

n8n · DeepSeek · OpenClaw · WhatsApp · JSON store (Supabase-ready)

- Built a WhatsApp-first AI support agent that classifies customer intent with DeepSeek and answers order-status, product, and return questions automatically from the shop’s own data.
- Implemented a production n8n workflow (webhook → normalization → intent classification → per-intent reply branches) with full conversation logging, RMA tracking for returns, and human-escalation flags.
- Wired an OpenClaw skill so the WhatsApp-connected agent relays customer messages to n8n and sends the reply back in seconds.
- Published with architecture docs, n8n workflow export, data schema, and impact analysis — designed to cut vendor response time from hours to seconds.

Jua Kali Supplier Intelligence & Trust Agent

n8n · GLM-5.2 · DeepSeek · Supabase · OpenClaw

- Designed an agent that collects supplier listings from classifieds and WhatsApp, uses GLM-5.2 to flag scams and extract product/spec details, and builds a searchable supplier trust database in Supabase.

Custom Gifting & Magazine Concierge Agent

n8n · GLM-5.2 · Supabase · WhatsApp · M-Pesa Daraja API

- Designed a WhatsApp concierge that captures client gift requests, generates design briefs with GLM-5.2’s long-context memory, and tracks the order from inquiry to design, payment, and delivery.

Rent Collection & Maintenance Request Agent

n8n · DeepSeek · Supabase · Africa's Talking · M-Pesa Daraja API

- Designed an SMS/USSD-first system that sends rent reminders, matches M-Pesa payments, and uses DeepSeek to categorize tenant maintenance requests into ticketed records.

Freelancer Invoice & Payment Tracker Agent

n8n · GLM-5.2 · DeepSeek · Gmail API · Supabase

- Designed an invoice assistant that detects invoices in Gmail, uses GLM-5.2 to extract amount, due date, and client details, and sends automated payment reminders.

EVERYDAY AUTOMATION WORKFLOWS

- WhatsApp lead intake & AI-qualified follow-up workflow
- SME social media content generation & approval workflow
- Customer support knowledge-base workflow (RAG over business documents)
- Meeting notes & action-item summarizer workflow
- Expense & M-Pesa transaction categorization workflow

SOFTWARE DEVELOPMENT BACKGROUND

- Freelance web developer — built websites for clients end to end (design, development, deployment).
- Built and published a production n8n + DeepSeek application (github.com/ryanreo/ecom-support) covering webhook handling, AI integration, data persistence, and documentation.
- Built web-based applications using software development principles, relational database design, REST APIs, version control, and technical documentation (JavaScript/TypeScript, Python, Node.js).

LEADERSHIP

St. John's Cadet Leader (2021) · School Prefect (2020)

EDUCATION

BSc Software Development — KCA University (2023 – Present, expected 2026)

TECHNICAL TOOLSTACK

Automation Stack	Integrations	Development
- n8n - OpenClaw - GLM-5.2 - DeepSeek - Supabase - MySQL - PostgreSQL - REST APIs - Webhooks	- WhatsApp Business API - Twilio - Africa's Talking - M-Pesa Daraja API - Gmail API - Google Sheets - Telegram API - Slack	- Git & GitHub - VS Code - Postman - Node.js - Python - JavaScript / TypeScript

LANGUAGES

English (Professional) · Swahili (Native / Professional)

CURRENT LEARNING FOCUS

LLM application development, AI agent orchestration, workflow automation, RAG systems, API integration, and AI-powered business process design.
